Functional Specification	2
Estimation	

1. Functional Specification

Acumatica version:

Overview

This document describes a customization for Acumatica Service Management intended to extend the system's capabilities for recording and posting labor-related costs from Service Appointments into the General Ledger. The customer requires labor time recorded on appointments to generate corresponding GL transactions without using the standard Project Accounting or Payroll modules. The customization enables direct posting of labor expenses into GL using controlled accounts and subaccounts defined in Service Management Preferences.

The solution introduces new configuration fields, updates existing appointment behaviors, and provides a new posting action that creates balanced journal entries linked back to the originating appointment.

Purpose

The purpose of this enhancement is to ensure that labor performed during service appointments is properly reflected in the company's financial reporting. Since the organization is not using Acumatica Projects or Payroll, labor costs currently do not flow to GL. This customization:

- Allows labor time to be converted into financial transactions.
Ensures accuracy by rounding Actual Duration to standardized 15-minute increments.
- Creates GL batches automatically and enforces data integrity by preventing post-creation modifications.
- Provides full traceability by linking the GL batch to the originating appointment.

Assumptions

- The customer does not use **Acumatica Payroll, Time Cards, or Project Accounting** for labor cost allocation.
- All service labor is recorded using Appointment line items with Line Type = *Service*.
- Actual Amount and Actual Quantity values are already correctly calculated and stored in appointments.
- Expense account configuration for each labor item is already maintained in the Inventory screen.
- Users performing this function have sufficient GL and Service Management permissions.

Out of Scope

The following items are not included in this specification:

- No integrations with external HR/Timekeeping systems.
- No automation for reversing GL transactions if an appointment is reopened.
- No enhancements to the calculation of Actual Amount or pricing rules beyond rounding Actual Duration.

Service Management Preferences screen

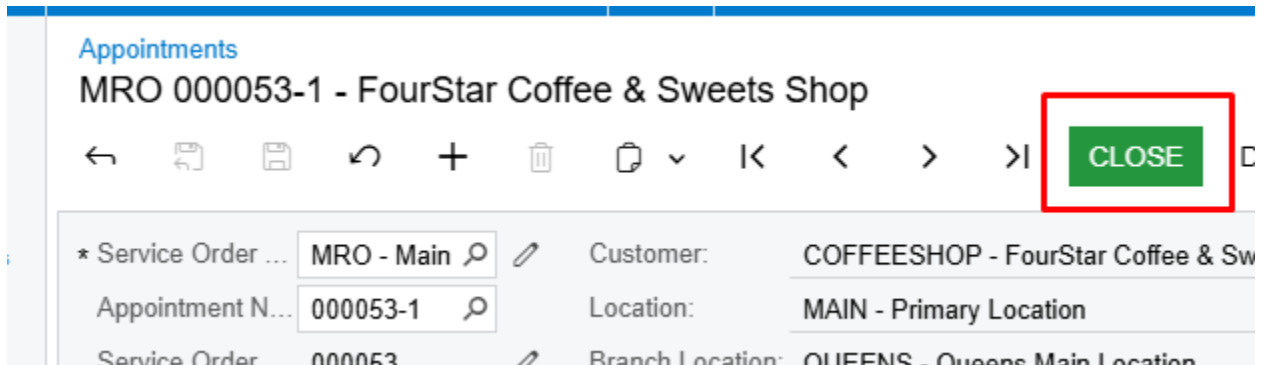

- **Add a new field “Service Labor Balancing Account”** under the GENERAL SETTINGS section

- Selector of all the Chart of Accounts
 - Required field
- **Add a new field “Service Labor Balancing Sub”** under the GENERAL SETTINGS section.
 - Default subaccount field
 - Required field
- **Add a new field “Role To Post To GL Service Labor”**
 - Selector of all Acumatica user roles

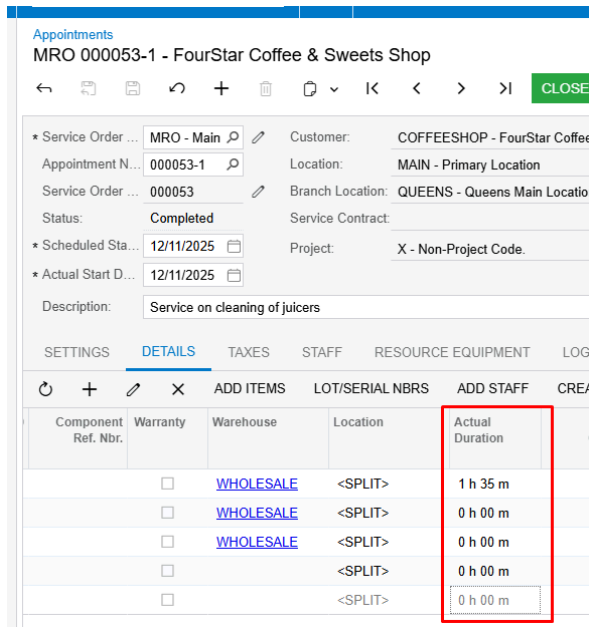

Appointments screen

- Adjust the CLOSE action button on the Appointments screen.

The screenshot shows the 'Appointments' screen for 'MRO 000053-1 - FourStar Coffee & Sweets Shop'. A green 'CLOSE' button is highlighted with a red rectangular box in the top right corner of the screen. Below the header, there are fields for 'Service Order' (MRO - Main), 'Appointment N...' (000053-1), 'Customer' (COFFEESHOP - FourStar Coffee & Sw), 'Location' (MAIN - Primary Location), and 'Branch Location' (QUEENS - Queens Main Location).

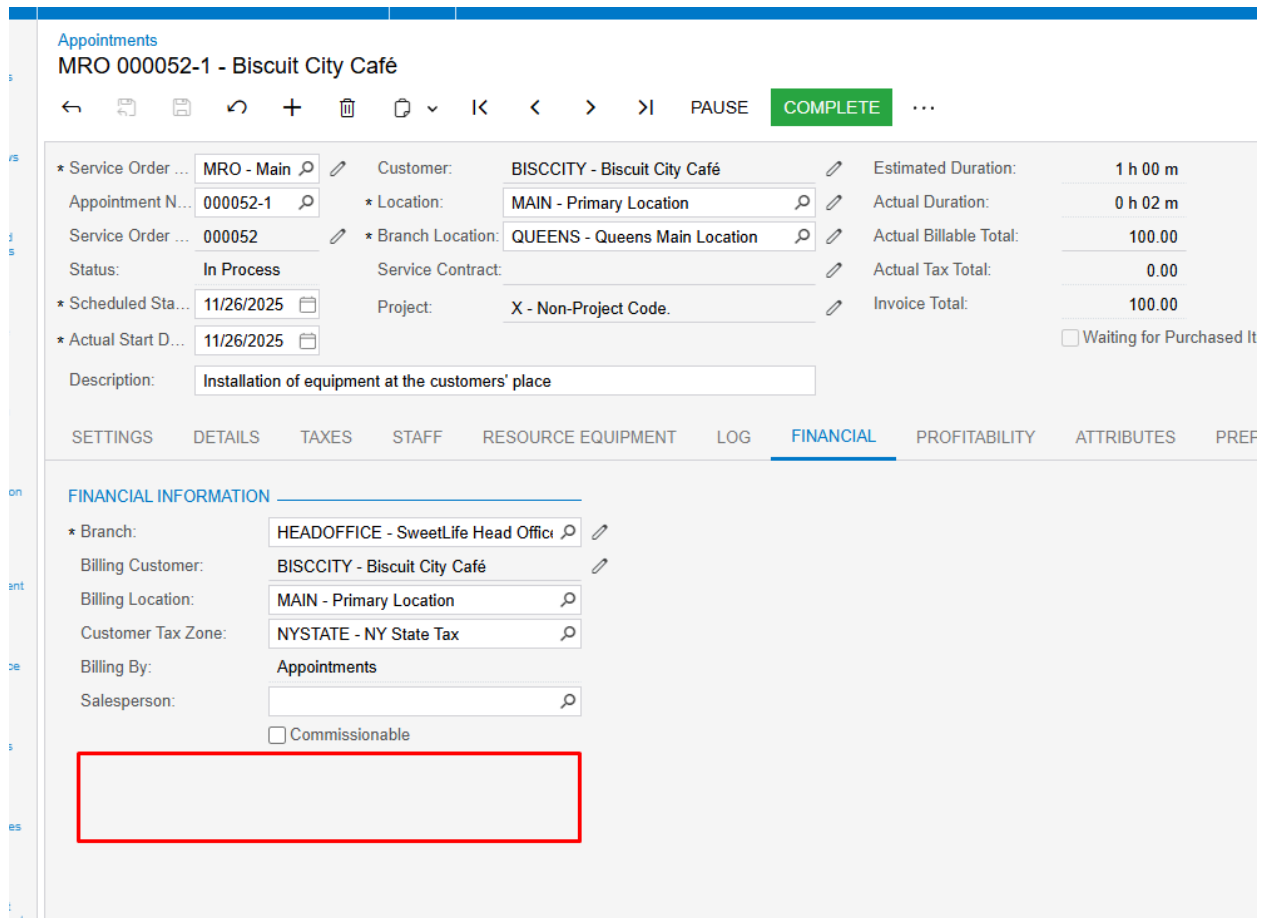

- When the **CLOSE** action button is clicked, the system should:
 - The system must automatically round *Actual Duration* up to the nearest 15-minute increment and then CLOSE transaction.
 - Rounding is always upward, not to the nearest interval.
 - Rounding Examples:**
 - 0 minutes → 0
 - 3 minutes → 15
 - 15 minutes → 15
 - 16 minutes → 30
 - 44 minutes → 45
 - 59 minutes → 60

The screenshot shows the 'Appointments' screen for 'MRO 000053-1 - FourStar Coffee & Sweets Shop'. The 'Actual Duration' field is highlighted with a red rectangular box. The field shows '1 h 35 m'. Below the field, there is a table with columns: Component Ref. Nbr., Warranty, Warehouse, Location, and Actual Duration. The table contains five rows, all with 'WHOLESALE' in the Warehouse column and '<SPLIT>' in the Location column. The 'Actual Duration' values are 1 h 35 m, 0 h 00 m, 0 h 00 m, 0 h 00 m, and 0 h 00 m.

Appointments and Journal Transactions screens (24)

- Add a new section “LINK TO SERVICE LABOR GL” on the FINANCIAL tab of the Appointments screen.

- Add a new field “Batch Nbr” on the “LINK TO LABOR GL” section
 - Link to the appropriate Service Labor JT if it was created from the custom action button “Post Labor to GL”. The logic behind it is described below.
- Add a new action button “Post Labor to GL”
 - This action button should be available when the following conditions are met together:
 - The status of the **appointment** is “Closed”;

- The system should **create a new Journal Transaction** with type **GL**.

- **Account** - should be taken from the appropriate appointment transaction -> Inventory ID -> GL Accounts tab -> Expense Account

- **Subaccount** - should be taken from the appropriate Inventory ID -> GL Accounts tab -> Expense Sub

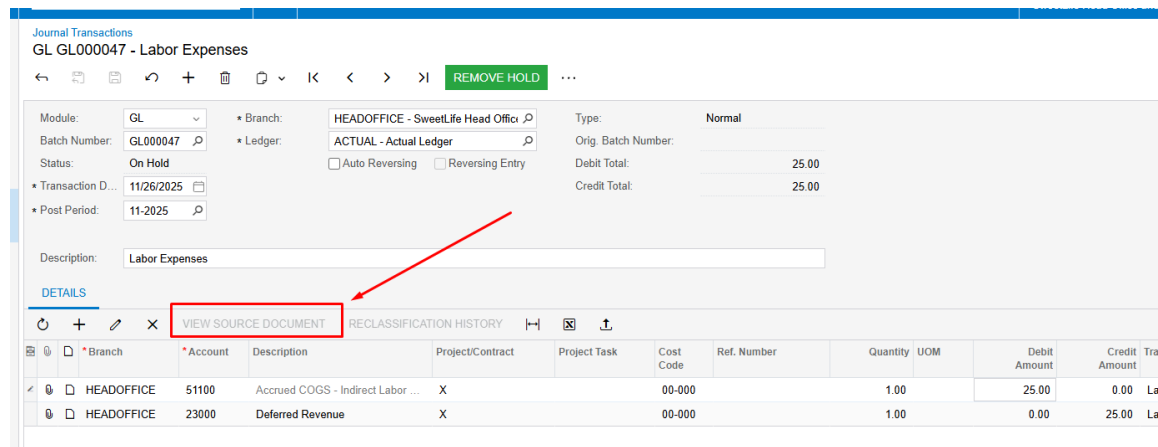

- **Quantity** - should be taken from the appropriate appointment transaction -> Actual Quantity.

Actual Duration	Actual Quantity	Actual Amount	Unit Price
1 h 35 m	1.58	158.00	100.0000
0 h 00 m	1.00	0.00	0.0000
0 h 00 m	1.00	4.15	4.1500
0 h 00 m	0.00	0.00	0.0000
0 h 00 m	0.00	0.00	0.0000

- **Transaction Description** - should be taken from the appropriate appointment transaction -> Description of Inventory ID
- **Ref Number** - Appointment Number
- **Amount:**
 - Debit line should be pulled from Appointments = Actual Amount

Actual Duration	Actual Quantity	Actual Amount	Unit Price
1 h 35 m	1.58	158.00	100.0000
0 h 00 m	1.00	0.00	0.0000
0 h 00 m	1.00	4.15	4.1500

- Add credit line. The credit line should be used to keep the GL in balance. Pull the next values to fill out the credit balancing line.
 - **Account** - custom field **"Service Labor Balancing Account"** from the Service Management Preferences screen;
 - **Subaccount** - custom field **"Service Labor Balancing Sub"** from the Service Management Preferences screen;
 - **Quantity** - 0
 - **Credit Amount** = total of all Debit amount lines
- The VIEW SOURCE DOCUMENT should be available and open the appropriate APPOINTMENT transaction.

Chart of Accounts Order

☐ 1:Assets 2:Liabilities 3:Income and Expenses

DATA ENTRY SETTINGS

- ☒ Hold Batches on Entry
- ☒ Hold Vouchers on Entry
- ☐ Validate Batch Control Totals on Entry

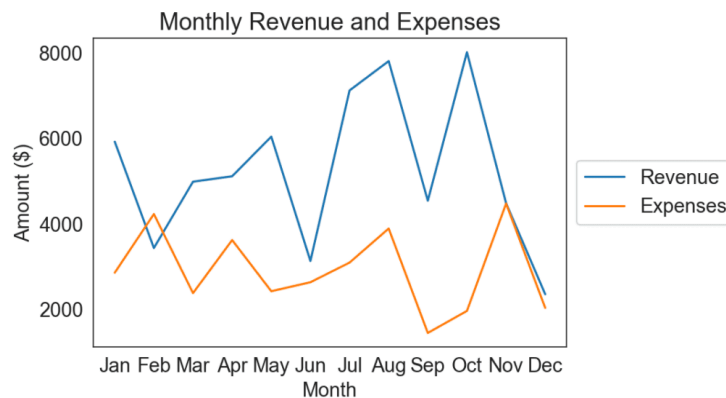

- The **“Post Labor to GL”** action button should be available only for users whose **role** matches the value specified in the custom field **“Role To Post To GL Service Labor”** of the Service Management Preferences screen.

Acumatica Mobile Application

- **Adjust the CLOSE action button on the Appointments screen. (2)**
 - The system must automatically round *Actual Duration* up to the nearest 15-minute increment and then CLOSE the transaction. Should have the same logic as in Acumatica UI;

Reports and Dashboards

- **Add a new “Report Designer” report called “Margin and Profitability For Service Orders**
 - Report showing our revenue versus costs for each service order.
 - Should be able to run it by service order, run it for all service orders, or run it by date range.
 - For each Service Order, the report should show
 - Service Order Number
 - Customer
 - Service Order Date
 - Total Revenue
 - Total Cost
 - Gross Profit (Revenue – Cost)
 - Gross Margin %
- **Add a new dashboard “Revenue vs costs by month for Service Orders.”**
 - Should be a graph that will compare revenue vs costs by month
 - Similarly to this:
